

i-wareness® Virtual Tour

The i-wareness® Virtual Tour is an interactive introduction to the most common security risks regularly encountered in everyday working environments. Presented in pictorial form, the user is able to move their cursor over the various hotspots in the scenarios. The hotspot areas highlight the key risks and then the associated good practice advice on each of the related topics, allowing the user to link directly to the Knowledge Zone for additional information and guidance as required.

The benefits

The i-wareness® Virtual Tour provides:

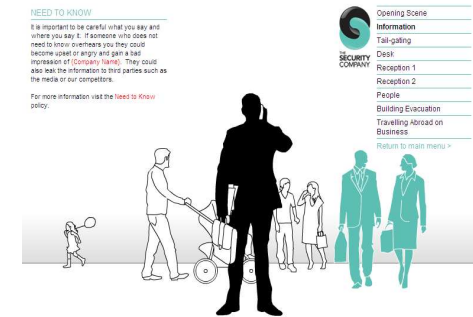

- An interactive, visual representation of common security risks regularly encountered in everyday working environments
- An informative introduction to security for induction programmes, outlining the key security messages you want your employees to remember
- A succinct and engaging learning method that avoids overloading the user with a lot of information
- The opportunity to link to the Security Knowledge Zone and other relevant external sources where users can access additional advice and guidance on a subject area
- Fully editable text and bespoke advice in line with your organisation's policies and key security threats

The scenarios

The i-wareness® Virtual Tour is built according to your organisation's security requirements and objectives. Using

scenarios from our portfolio it is possible to tailor the Virtual Tour to specific audience types or to promote key security threats. A standard Virtual Tour contains five scenarios with the option to add more if required. Our current portfolio contains the following scenarios:

- People
- Reception
- Call Centre
- Tail-gating
- Clear Desk Policy
- Working at home
- Building evacuation
- Company Information
- Travelling abroad on business
- Travelling in the UK on business

Javascript must be enabled and flash nine installed (as a minimum) for full functionality of the Virtual Tour.
